SECRETMAP

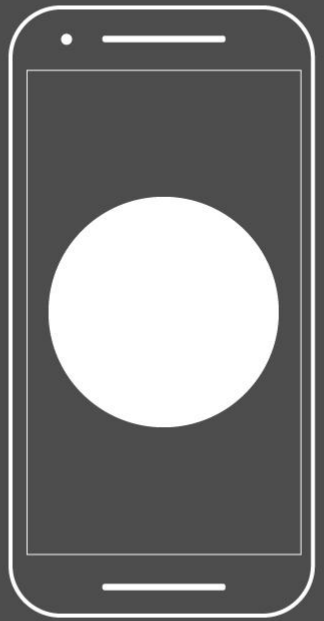

secretmap.com

0th Dimension

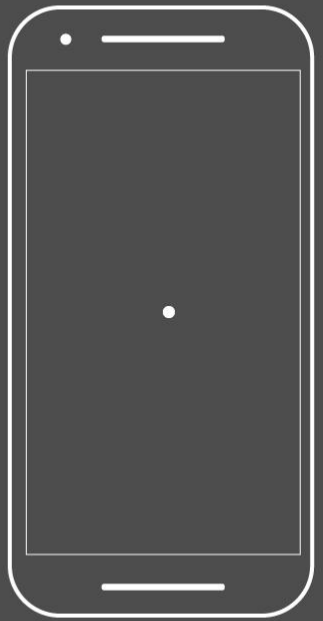

After downloading the app via the email, a single button registers you in the event.

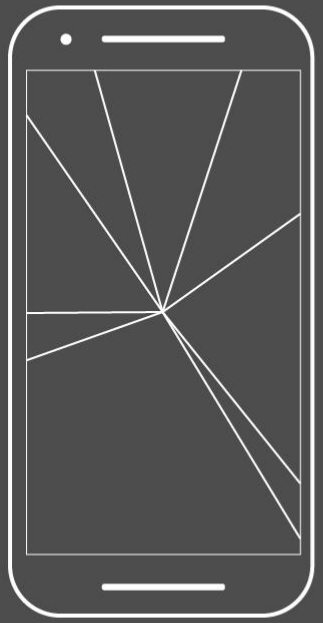

The background suddenly shrinks very fast into a single dot.

1st Dimension

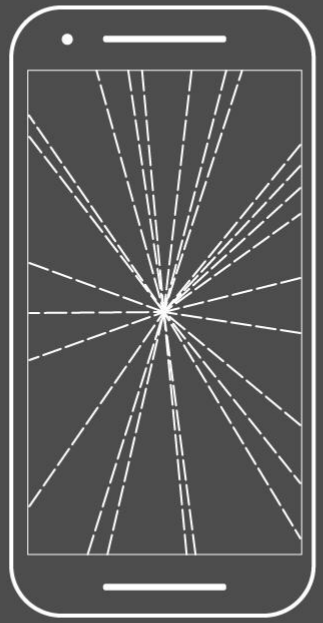

The dot progressively vibrates and glows more and more as we approach the time of the transcension through the 2nd dimension.

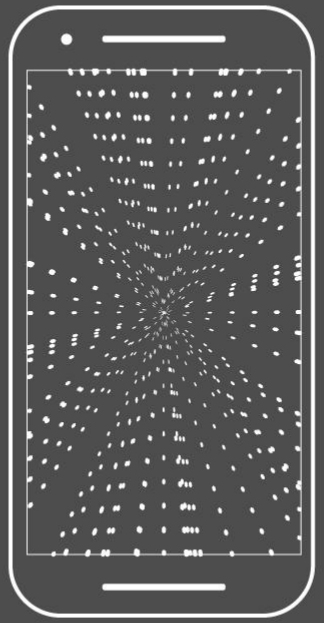

2nd Dimension

A notification welcomes you to the 2nd dimension and when you open the app the dot explodes in multiple 2D lines.

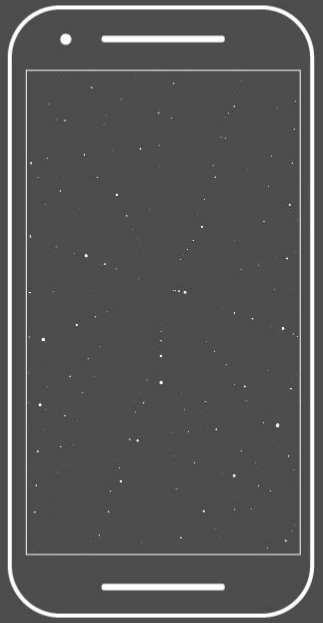

Progressively more lines appear and divide into dots being projected away.

The scale of the dots start varying and start giving a sensation of volume through the screen.

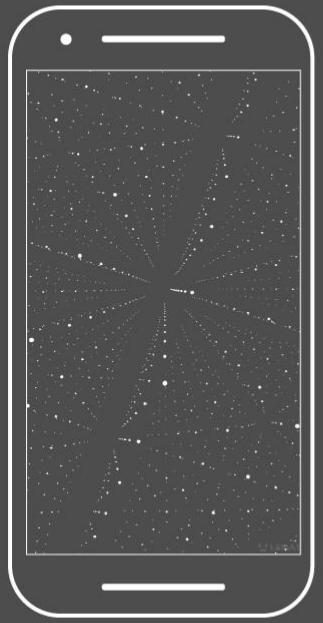

Progressively your phone gives you more freedom to rotate and move around...

3rd Dimension

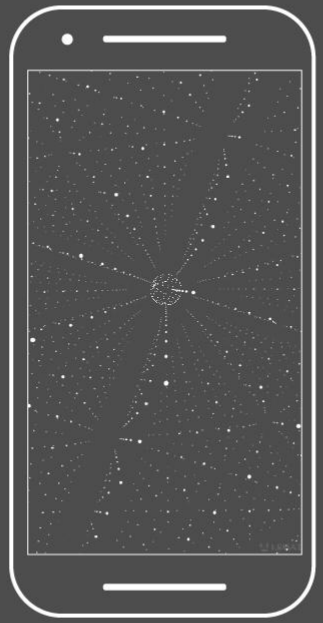

...until everything becomes a giant star field where you can walk around freely.

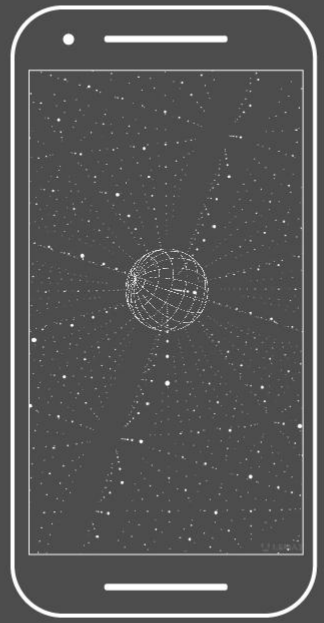

4th Dimension

More and more stars appear and your vision grows further.

When you receive the welcome to the 4th dimension you can now see as far as the location of the event. You notice the bubble of the world growing in the distance.

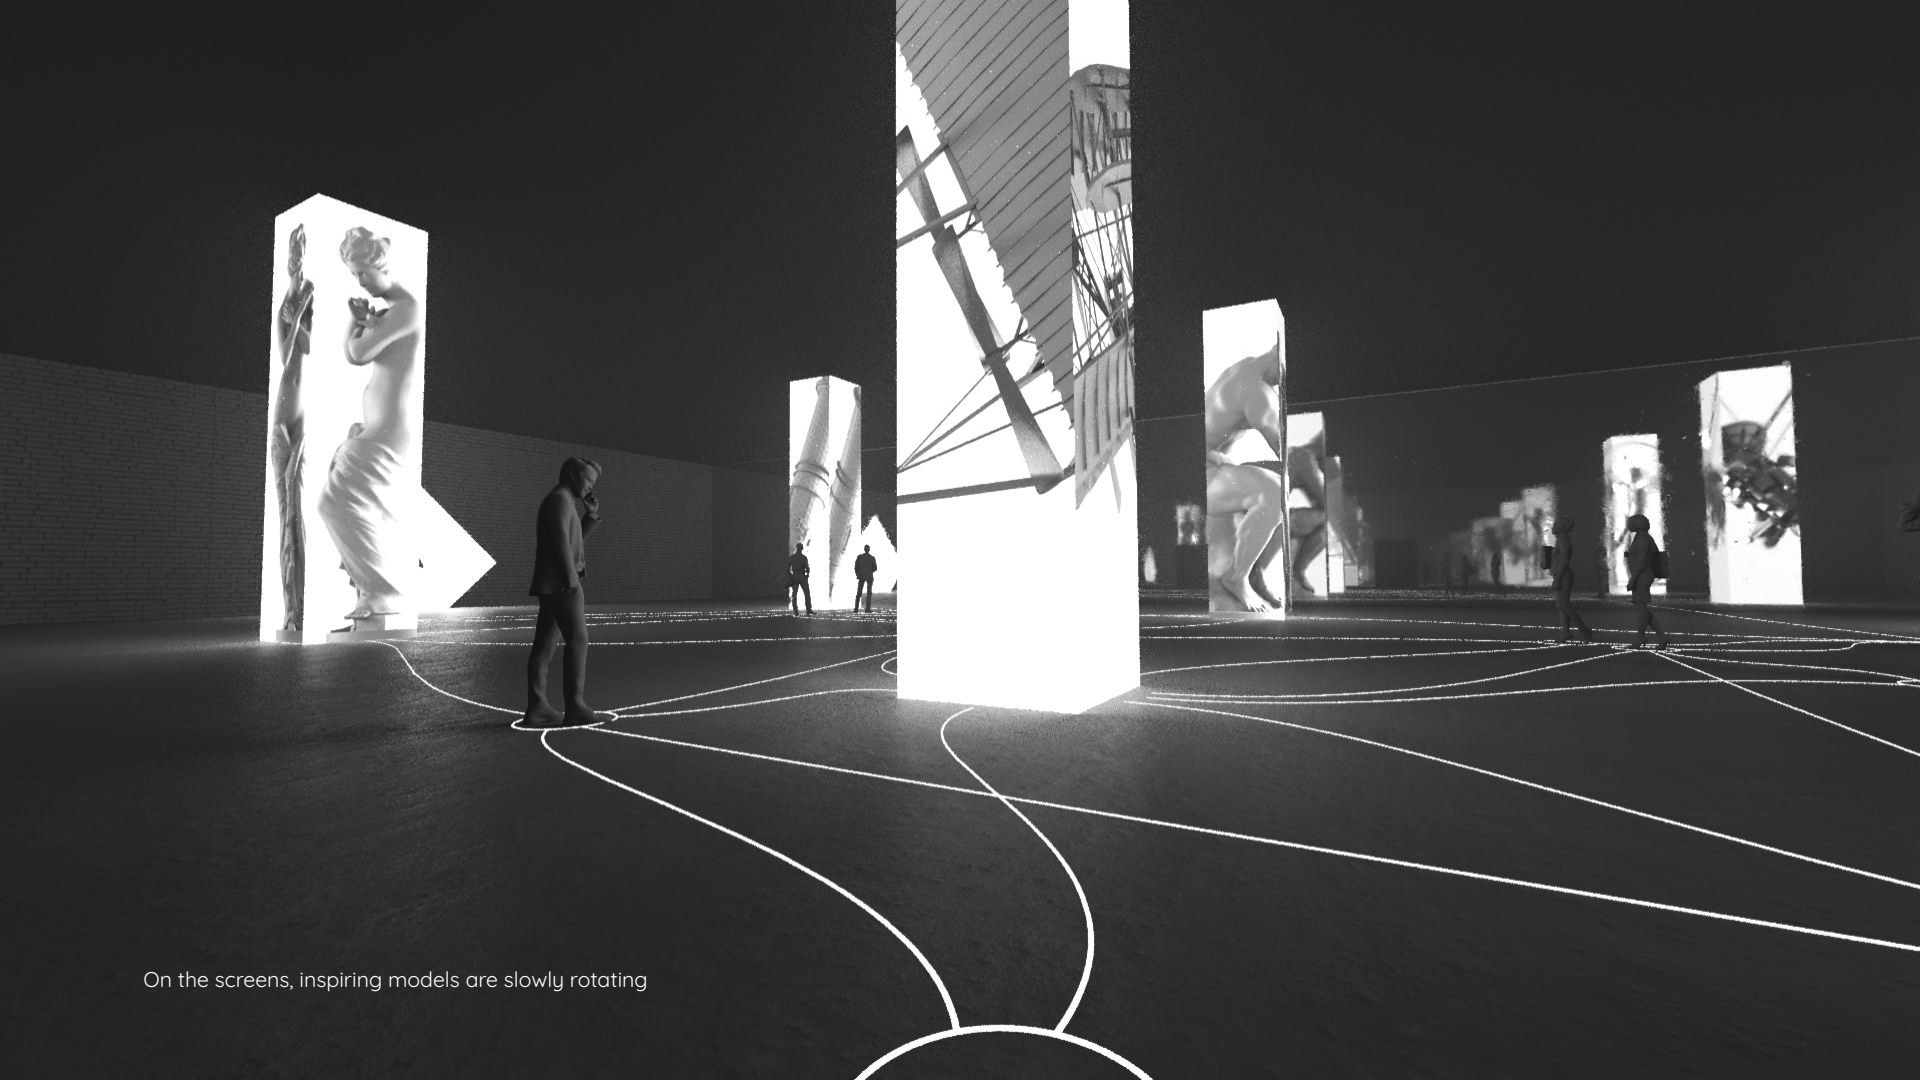

It grows and glows progressively until it is time for you to drive to the event.

In the room, giant mirrors reflect the pillars endlessly,
making the room look like an infinite cathedral.

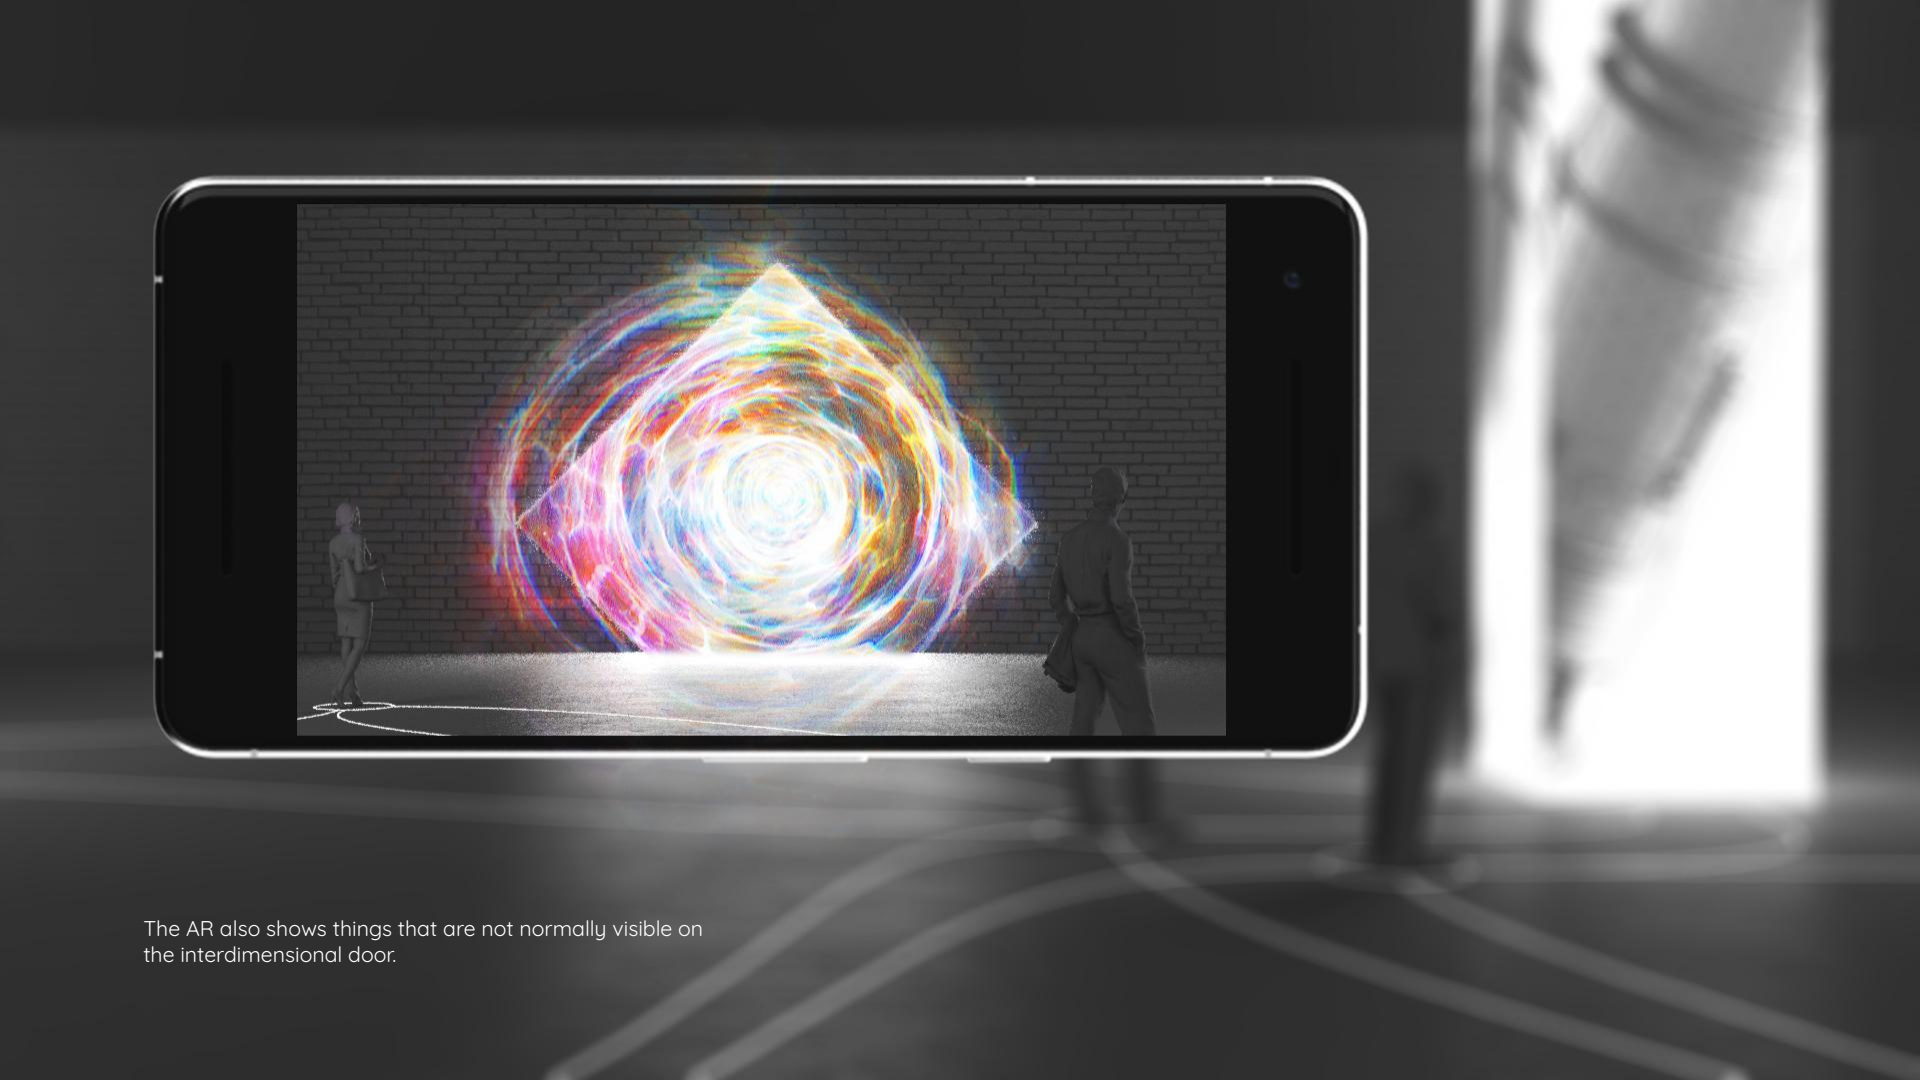

The way the beams are situated in the space feels like people physically entered the AR star field.

On the screens, inspiring models are slowly rotating

With the AR app you can select a model and rotate it.
It also affects the model on the screens.

The AR also shows things that are not normally visible on the interdimensional door.

Door opening

The performers get in the room and use prisms to converge the rainbow beams into the interdimensional door.

The pillars are getting emptied of their content like giant tanks of liquid energy into the ground. The energy is beamed into the portal and opens it.

6th dimension

The screen content in the 6D

You can select a beam by aiming at it with your smartphone. Instantly, the beam changes color to show you that it is selected.

When you click the beam spreads out and a bubble world appears in AR above the beam.

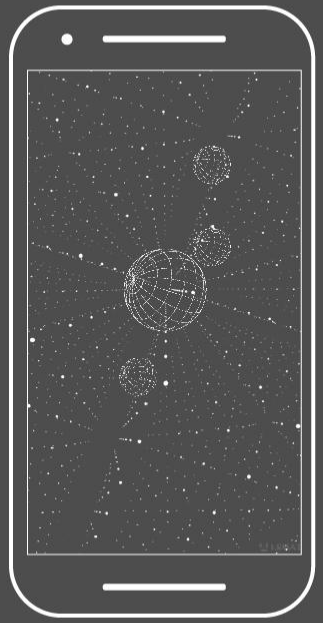

The beam also adopts the color of the bubble world.

7th Dimension

After the event a new notifiation welcomes you to the 7th dimension.

Inside the app a message informs you that new content is on the way and prompts you to keep the app installed.

If you look around you can always see the bubble worlds of other people at any moment or place.

Most importantly you can now see the next event bubble world located in the space.
